

THREAT INTELLIGENCE:- FOR SOC

Aim:-

To analyze and understand threat intelligence techniques using a Try HackMe SOC-focused room

Algorithm:-

1. Collect threat intelligence data from various sources
2. Analyze indicators of compromise (IOCs) and attack patterns
3. Correlate findings with SOC monitoring tools
4. Generate actionable insights for detection and response

Questions

1. How many unique IP addresses were provided in the IOC list?
11
2. Based on the set of IOCs how many IOC hits were discovered in the logs search query
3. Out of the total number of IOCs how many unique

IP addresses were discovered in the logs?

Ans 7

4. How many connections were made to 185[.]224[.]128[.]215?

Ans 21

5. What is the IP address of compromised host

Ans 10.10.196.49

6. What is the destination port of connections made to 107[.]1175[.]202[.]151?

Ans 80

7. How many DNS queries to agrsaorxe [.] have been created?

Ans 11

8. What is the IP address used for DNS sinkhole

Ans 104.21.48.143.172.67.186.179

9. How many hits were caused by connections to sinkholed domains?

Ans :- 192.169.5.13

10. How many unique domains have been sinkholed?

Ans 115

11. What is the value of alert field in the converted Easy Alert rule?

Ans 12

12. How many alerts were generated by rule

Ans debug

13. How many unique domains were sinkholed via 0.0.0.0?

Ans 40

14. What is the sinkholed domain that has rule ID

1 3 Ans

4

RESULT:-

The experiment has been successfully completed & verified
