

TOR

Aim:-

To study the working of the Tor Browser for anonymous internet communication

Algorithm

1. Install the Tor Browser
2. Launch the Tor application
3. Connect to the Tor network
4. Route internet traffic through multiple Tor nodes
5. Access websites anonymously

- Run `apt-get install tor` to install/update your Tor packages
- Run `service tor start` to start the Tor services
- Run `service tor status` to check Tor's availability
- Run `service tor stop` to stop the Tor service
- Run `apt install proxychains` to update
- Run `nano/etc/proxychains.conf` to edit in the setting
- Run `proxychains firefox`
- Also try running a test on `dnsleaktest.com`

- Finish the installation
- Launch the Tor Browser & set your privacy settings to level 2

Q What is the search engine at the following onion address

<https://duckduckgogg42xjoc72x3sja6f1marf16twagswz>

Ans DuckDuckGo

RESULT:-

Tor was studied successfully. Anonymous browsing was understood, objective was achieved
