

SECURITY PRINCIPLES

Aim:-

To understand the fundamental principles of cybersecurity by studying the CIA triad [Confidentiality, Integrity and Availability], Identifying adversaries and their threats and risk using security principles in TryHackMe.

1. Click on the "View Site" and answer the five questions. What is the flag that you obtained at the end?

Ans THM {CIA-TRIAD}

2. The attacker managed to gain access to customer records and dumped them online, what is the attack?

Ans Destruction / Denial / Disclosure

3. A group of attackers were able to locate both the main and the backup power supply systems and switch them off. As a result, the whole network was shutdown.

Ans Denial / Destruction

4. Click on "View Site" and answer the four questions. What is the flag?

Ans THM { SECURITY - MODELS }

5. Which principle are you applying when you turn off an insecure server that is not critical to business

Ans 2

6. Your company hired a new salesman, which principle are they applying when they tell you to give them access only to company products and sales

Ans 1

7. While reading the code of an ATM, you noticed a huge chunk of code to handle unexpected situation such as network disconnection & power failure

Ans 5

8. What is vulnerability?

Ans Vulnerable means susceptible to attack (or) damage. In information security, a vulnerability is a weakness.

~~24/12/20~~ RESULT:-

Thus the basic "SECURITY PRINCIPLES" including security models and concepts of vulnerability were successfully studied using "TryHackMe Security Principles Room".
